Formation testing is the final evaluation step before the well is put into production and provides essential information to design the well completion and production

Fundamentals of Formation Testing - Schlumberger

The "formation tester," offered in wireline and MWD/LWD operations, is different. It collects actual downhole fluid samples for surface analysis, and through pressure transient analysis, provides direct measurements for pore pressure, mobility, permeability and anisotropy. These are vital to real-time drilling safety, geosteering, hydraulic fracturing and economic analysis.

FORMATION TESTING AND SAMPLING IN LOW-MOBILITY FORMATIONS

Fundamentals of Formation Testing Cost-effective formation testing is a vital part of modern oil and gas operations. As production companies pursue reserves in high-cost, high-risk environments, formation testing plays an increasingly prominent role in decision making, but complete understanding of downhole conditions is ...
